Abstract of EP0836189

A multimedium optical disk wherein whether image titles need emulation AV functions can be instantly judged even when the image titles recorded thereon have individual modes. The reproduction type information including a first flag showing whether an image title is expressed by a single or a plurality of pieces of path information in accordance with a set value, and a second flag showing whether the image title is expressed by using branch information or not in accordance with a set value is recorded on a manager region of the multimedium optical disk correspondingly to the control information on each image title.
